## TomTom BRIDGE: Finding the perfect BRIDGE mount for your vehicle with ARAT

By taking advantage of TomTom BRIDGE systems for their fleets, companies have a solution geared towards their specific business. To enable drivers to safely and comfortably reach the BRIDGE, ARAT Spezialhalterungen GmbH combines screen mounts and vehicle-specific mounts, creating an ideal integration in your vehicles' cockpits.

ARAT has taken on the challenge of retrofitting TomTom BRIDGE in commercial vehicles with mounting solutions that help ensure that accessibility, safety and handling is optimal for your drivers - while giving them a clear view of the road without visual obstructions.

Thanks to a specially-developed spherical head in the mount, drivers can adjust the orientation and viewing angle relative to their seat position, allowing glare-free operation.

### The solution

- Docking interfaces have a BRIDGE cradle that follows AMPS standard.
- The system can be integrated in the cockpit quickly.
- All components are approved, secured against unintentional loose, offer a secure hold and are resistant to temperature fluctuations and vibrations in the vehicle.
- TomTom BRIDGE is easily accessible by the driver, offers a clear view to the roadway, and can be easily removed any time.

### The results

- Virtually any vehicle can benefit from an attractive, safer, and easy-to-use semi integration.
- More than 6,000 garages, Bosch services, car dealerships, telematics vendors and commercial vehicle retrofitters have relied on ARAT installation solutions for TomTom devices for many years.

“We’re delighted to work with TomTom BRIDGE to enable fleet drivers to easily reach their BRIDGE with comfort, have clear visibility and stay safer on the road.” ~ Daniel & Mirco Koepe, Chief Marketing Officer ARAT
