

## TomTom BRIDGE: Combining logistics, communication and navigation with Daimler Fleetboard

Daimler FleetBoard GmbH is located in Stuttgart and operates globally in Europe, South Africa, the Middle East and Brazil. Since mid-2010, more than 160,000 vehicles have been equipped with the FleetBoard system.

The new DispoPilot.guide converts drivers into logistics managers, making them more efficient and better networked on the road. The modern and high-performance TomTom BRIDGE supports drivers in optimum handling of all processes concerned with transport and orders.

### The solution

- A unique cradle that interfaces the truck dashboard with TomTom BRIDGE.
- The DispoPilot.guide can be easily removed from the cradle with just a single movement.
- Even if the ignition is switched off and the driver is outside the vehicle, the FleetBoard Logistics Management Service will provide an overview of all order details in the driver's hands.

### The results

- Providing a single solution for all customers, available in 46 countries.
- Delays can be reported promptly to the dispatch office, while an accurate expected time of arrival (ETA) ensures timeliness – as well as savings on fuel and costs.
- Reduced synchronisation processes, along with fewer errors and detours, plus unnecessary trips are avoided.
- Operation time is improved with optimised one-click navigation.

*“Together with TomTom BRIDGE, we enable our customers to design their transport processes in an even more economically efficient way – right now, and into the future.”*

*~ D. Muller, CEO, Daimler FleetBoard*
