

Turning Fares into Fiscal Reports

TomTom BRIDGE: Ease of fiscal compliance for the taxi trade with Frogne

Frogne, Scandinavia's leading manufacturer of taximeter and fleet management systems, was searching for a solution to offer the taxi trade a fiscal taximeter combined with a mobile dispatching unit.

As the taxi trade moves towards increased digitisation, mobile solutions that meet driver demand for increased mobility, passenger mobile use, and taxi management ROI concerns are increasingly more important – especially in a business where there are shorter investment cycles. Additionally, taxi operators are now obliged to ensure full fiscal compliance with the relevant authorities across many countries in Europe.

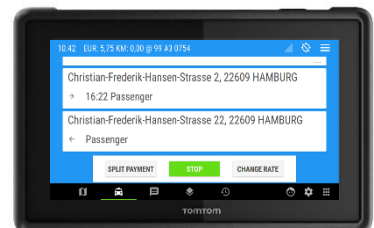

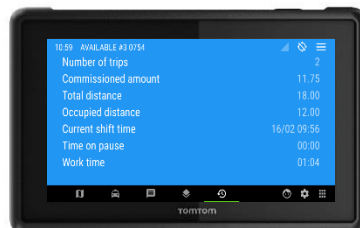

The solution

- Based on the open Linux platform, taximeter functionality can be adapted broadly for all conceivable future regulatory requirements, and even updated remotely.
- Complete documentation of operational data, including exact geographical location and financial charge for each taxi trip, as well as all tariff plans.
- Each tour record is digitally signed and immediately transmitted via GSM to a database.
- Full fiscal functionality of the taximeter ensures that the taxi owner/driver is operating in full compliance with future fiscal EU and national requirements.

The results

- Integration of navigational data and fiscal functionality in a taximeter is an industry first, about to revolutionise the taxi trade.
- First European taximeter solution with built-in adaptability for future fiscal and EU regulatory requirements.
- The solution is being tested by taxi companies in Germany, Denmark and Finland within weeks of the launch.

“The TomTom BRIDGE and Frogne solution delivers an innovative, reliable and robust way to meet fiscal compliance needs for the taxi industry.” ~ Kaare Frogne
