

Helping Save Lives With The Rescue Track Solution

TomTom BRIDGE: Improving emergency response services with Convexis

A Europe's leading solution provider for rescue operations, Convexis, was searching for a suitable hardware solution to offer in ambulances.

As the emergency industry moves towards increased digitisation, a solution was needed that offered a ruggedised hardware device with a reliable software solution.

The solution would streamline emergency response and improve communication between ambulance workers and hospital dispatchers.

The solution

- Rescue Track Guard Display shows all relevant information about the specific application, including positions of all involved in the use of life-saving equipment, exact usage, and driving routes.
- With Rescue Track Clinic Display, hospitals and clinics are prepared for incoming emergencies. Patient data, pre-clinical diagnosis, or expected time of arrival of the rescue are shown on a large display in the emergency room.

The results

- Already adopted in more than 3,000 rescue vehicles.
- In virtually all control centers throughout Germany.
- Used by more than 700 customers in 6 countries.

"Fast, ruggedised, reliable and excellent support. The best hardware decision we've made." ~ Daniel Korn, CEO, Rescue Track
