

# Freeing Drivers to Focus on the Road and their Passengers

## TomTom BRIDGE: On-board technology making public transport more efficient with TeleMatrik

TeleMatrik PTS GmbH is an Austrian company with 20 years of expertise in technology and software in the public transport sector.

To meet the high expectations of passengers travelling by public transport, a comprehensive and reliable information system is required. The BusMatrik solution on TomTom BRIDGE offers an innovative, robust and stable solution specifically designed for the sector.

BusMatrik is a self-contained, without any connections to the bus and with the small Matrik Bus connector it can be advanced to a full on board technology. Automatic data exchange, offline operation, autarchic connection monitoring service and full stop timetable service are some of the great features of the system.

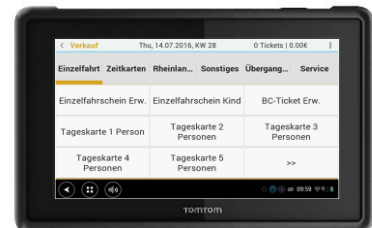

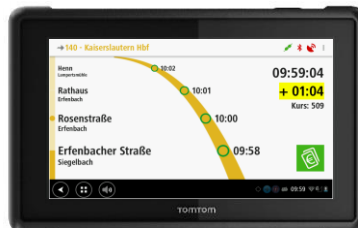

### The solution

- Driver assistance for automatic tracking of the route.
- Real-time dashboard for bus drivers, including stop sequence and actual timetable status.
- The complete Matrik provides a planning system, on-board technology, a smart ITCS light, and real-time information for stop time monitoring on screens, internet or smart phones.
- It is an all-in-one system that would also suit small public transport regions.

### The results

- Fast and efficient sale of tickets with use of the BusMatrik-printer.
- Easy-to-use interface that allows the driver to focus on the road and passengers.
- Connection of TomTom BRIDGE with ticket sales and account management is simple, fast, reliable, and secure.

*“Our partnership with TomTom BRIDGE offers greatly improved efficiency for public transport operators and easy access to timetable info for passengers.” ~ Linus Gebhardt, CEO TeleMatrik*
